**Customer Reviews**

I picked up this workbook as supplemental material because someone on a homeschooling website recommended it. Well, I've wound up depending upon it as my primary 7th grade math book (leaving my Saxon Math books almost untouched). Great, clear exercises, and plenty of 'em!
(Though if you’re an adult who’s brushing up on your own math while helping your children, you may need to rely on a text to explain exactly why the authors are choosing to solve problems the way they are...i.e., there are always alternative methods to solving equations, and I’ve been sure to explain to my son that there are several ways to arrive at the same answer, a key point in understanding decimals, fractions & percents.) Please, Spectrum, continue past 8th grade!

I purchased grade 7th and 8th. No wonder they stop there because it’s the same materials all over again. Just buy either one, 7th or 8th, and use it for both grades because unless you need more practice problems, it’s the same topics.

I bought this Spectrum 7th Grade Math workbook for my eleven year old daughter. I’ve found it ideal for her, since each subject is introduced with good clear concise explanations, and she hates reading anything long or complicated. As other reviewers have commented, the exercises are plentiful and well structured. My daughter who is good at maths generally, has been whizzing through it. I would say the level is 6th/7th grade. Since buying this Math workbook, I’ve bought the 8th grade math workbook and 8th grade enrichment workbook for her to progress onto, as well as the Geometry and Algebra workbooks for more concentrated practice. I’ve also bought her the Spectrum English books including writing, language arts, phonics and vocabulary. She loves using them all and has made massive progress in her English which was weak, but now probably at an A standard. I’ve become such a Spectrum fan that I’ve also bought the science workbooks (literally superb) and just ordered the test books and Geography. I’m a homeschooling mom and use a lot of curricula products but Spectrum is hands down best value for money and absolutely top notch. I also use and have used Singapore Math, MEP Math, School Specialty Publishing, A Brighter Child, and Pylon Math, but if I had to choose just one curriculum I’d recommend Spectrum since it covers all the bases and does it well.

Just what I wanted! It’s a wonderful practice book that covers all the basics. Lots of repetition, which is what I felt my child needed to really get comfortable with operations. I’m using it to keep his skills from backsliding over the summer.

I bought this book used (from ) and it was like new. My home schooled 7th grader is using this book for math this year. It seems to cover all the basics, but teaching some of the concepts will take extra effort. The book does not teach; it only tests for understanding. The beginning lessons are very
easy reviews, but they do increase in difficulty.

I bought this book to keep my child fresh on math during the summer. The work sheets were great. As this was a review of what she learned during the school year she didn't need direction. If you are looking for a book to teach math, this isn't it- but it was PERFECT for our needs.

I homeschool my kids and this is perfect. It has the answers in the back and if you are not for sure on how to do the problem it has an example on the top.

Only basic problems were given. Sample problems were too easy with no challenging problems. Grade 8 Spectrum Math covers same topics but has better sample problems. If your child is 7th grader and you are getting this to prepare him/her for the school, get Grade 8 Spectrum Math.
